The following table shows the results of the 2019 National Survey of the Health and Safety of the Working Population (NSHWP) for the period 2019-2020. The table is divided into two main sections: 'Health and Safety' and 'Work and Life'. The 'Health and Safety' section includes data on the prevalence of various health conditions, while the 'Work and Life' section includes data on work-related factors and life satisfaction.

Category	Sub-category	Prevalence (%)
Health and Safety	Overall prevalence	15.2
	Physical health	12.5
	Mental health	18.7
	Chronic conditions	22.3
	Acute conditions	10.1
	Work-related conditions	14.8
	Life satisfaction	11.9
	Work-life balance	13.6
	Work environment	16.4
	Work stress	19.5
Work and Life	Work satisfaction	17.8
	Life satisfaction	14.2
	Work-life balance	12.5
	Work environment	15.1
	Work stress	18.9
	Work satisfaction	16.3
	Life satisfaction	13.7
	Work-life balance	11.4
	Work environment	14.6
	Work stress	17.2

The table shows that the overall prevalence of health and safety issues is 15.2%. Physical health issues account for 12.5%, while mental health issues account for 18.7%. Chronic conditions are the most prevalent, with a prevalence of 22.3%. Acute conditions account for 10.1%. Work-related conditions account for 14.8%. Life satisfaction is 11.9%, work-life balance is 13.6%, and the work environment is 16.4%. Work stress is the most prevalent work-related condition, with a prevalence of 19.5%.

The 'Work and Life' section shows that work satisfaction is 17.8%, life satisfaction is 14.2%, work-life balance is 12.5%, work environment is 15.1%, work stress is 18.9%, work satisfaction is 16.3%, life satisfaction is 13.7%, work-life balance is 11.4%, work environment is 14.6%, and work stress is 17.2%.
